The TRANSLYFT Manual Work Platform is a convenient, ergonomic and safe way of making sure that the employees is lifted to the best ergonomic height. The lift is designed with slaughterhouses in mind as the platform lifts the employee up to the product for processing and gives better access to cutting and prepping ensuring better working conditions. The design can be equipped with various tools that make the required processes more effective such as hoses, holder for cutting tool/meat saw, hand sanitizers and so on.

The platform is placed on a pillar that is fixed to the ground. This takes up a minimum of space and makes the platform sturdy up to 250 kg. The pillar and platform is designed with easy cleaning in mind as the design is open and the platform perforated which makes it easier to clean out residue.

Note that we can customize the solution for your needs. Find more information at www.translyft.co.uk

Customize your manual work platform with for instance a holder for a hose.

Everything is designed to make cleaning of the product easier. For instance is the lift platform perforated so that you can wash of residue.
